

FILTERS SERIES 200

The **series 200** include particulate, gas and combined filters in a synthetic resin container built with special screw in connector for use with half mask **POLIMASK® 100/2**, **POLIMASK® Beta**, or **C607/TWIN** full face mask.

MAIN FEATURES

- COMPACT filters** provide a protection far above the minimum norm requirements, though with reduced volumes. All the other features remain unaltered.
- They are made by an encapsulated pleated paper disc. The material is impermeable to water, preventing reduction of performances when used in high humidity conditions.

PARTICULATE FILTERS

- Class P2 and P3 BIOSTOP* particulate filters comply with EN 143 and therefore with the local European countries standards when used in pairs and have a filtering efficiency greater than that required by current standards.

COMBINED FILTERS

- Comply with EN 14387 and therefore with the local European countries standards when used in pairs. The combined filter gives excellent protection from both gas and particle (dust, fumes and mists) contaminants (BIOSTOP).
